

## Reliable, Economical Alternative to Single-Phase Conventional Circuit Reclosers for Rural Line Applications

- **Ideal for locations that typically experience one or two temporary faults during a storm.** Restores service when fault is temporary.
- **Foolproof fault protection and service restoration.** If fault persists after the first cutout operates, the second cutout operates, then the third . . . opening circuit permanently.
- **Reduces operating costs.** Crews make fewer trips to replace fuse links.
- **Uses same Positrol® Fuse Links and Multi-Wind™ Fuse Tubes as your other XS Fuse Cutouts.** Simplifies truck and warehouse stocking.
- **Works perfectly with S&C Loadbuster® Tool.** Makes load switching easy.
