

How Do Outages Affect Commercial and Industrial Companies? Let Them Tell You.

When S&C Electric Company surveyed 253 commercial and industrial companies to determine the impacts of power outages, we got some revealing and illuminating answers.

All Outages (Even Short Duration) = \$ Lost

“Power outages affect a healthcare organization equally, whether it is for a minute or for an hour.” – HEALTHCARE

“Our production stops due to short-duration outages. It doesn’t matter whether the outage is short, it has an impact on the production and increases the downtime.” – MANUFACTURING

“If [an outage] is unscheduled even for a short duration, the systems crash, resulting in loss of data, and the infrastructure is not supported for research.” – EDUCATION

That’s Why Companies Are Tracking Their Outages—and Their Costs

“We have a system to keep track of frequency and duration. We then analyze the records and assess the loss because of the outages.” – MANUFACTURING

“We track and measure outage frequency by using an in-house software.” – HEALTHCARE

“We have monitors on our servers and network gear that respond back with the outage information.” – RETAIL

Moving Forward, Customers Expect Better Reliability and Resilience

“That’s [utilities’] obligation to give me full service and bring back power as quickly as they can... so I can get back to business faster.” – RETAIL, SMALL FRANCHISE

“In healthcare we need power 24/7 for the life safety of patients, residents, employees, and visitors.” – HEALTHCARE

“If we are able to get power back quickly, it would help us to lower our downtime, which would further help us to end our work in time.” – MANUFACTURING

By implementing grid solutions that improve reliability and advance resilience, utilities can both decrease their risk for compensation demands and satisfy the needs of their key customers.
