The GridMaster® Microgrid Control System controls, monitors, and communicates with any piece of power generation, load, and distribution equipment in the industry. The controller is IEEE 2030.7 compliant.

By combining end-to-end microgrid capabilities, reliable products, and extensive experience, S&C leads the industry in integrating complex microgrids. All applicable utility, military, and cybersecurity standards met or exceeded.

The only integrator to receive an Authorization to Operate (ATO) from the U.S. Department of Defense.

7 layers of cybersecurity defense to protect the core code and microgrid—most industry control systems only have a firewall.

2,000+ control points and values processed every 2 seconds across all existing microgrid projects.

S&C is the industry’s only true microgrid integrator.
